Chalmers et al.: Network analysis **Chalmers-Cervin-Medvedev-2025**

Rebecca A. Chalmers, Matti Cervin, and Oleg N. Medvedev. "Network analysis". In: *Handbook of assessment in mindfulness research*. Springer Nature Switzerland, 2025, pp. 115–130. ISBN: 9783031472190. DOI: 10.1007/978-3-031-47219-0_70.

Abstract: Network analysis has been recently adopted by the field of psychology to explore networks of symptoms in psychopathology, and wider interactive networks of biological, behavioral, and psychological factors influencing mental health. The network theory of psychopathology conceptualizes symptoms of mental disorder as causally connected, rather than being caused by disease or an underlying latent variable. The most common type of network analysis is based on partial correlations which estimate unique relationships between two variables while controlling for the effect of all other variables in the network on that relationship. Network analysis has the advantage over more traditional analytical methods in that it can examine multiple relationships between several variables at one time, without the need to arbitrarily assign a dependent or independent variable. It allows investigation of relationships between variables as causes of psychopathology, rather than as symptoms that share a single causal factor. Network analysis can be applied to mindfulness research, examining the structure of multifaceted mindfulness models, investigating how specific mindfulness factors relate to dimensions and symptoms of mental health, and exploring how relationships in a network change after mindfulness-based interventions. This chapter provides an introduction to the theoretical framework of network analysis and its practical applications for psychological research relevant to mindfulness.

Chow et al.: Continuous-time dynamic models: Connections to structural equation models and other discrete-time models **Chow-Losardo-Park-etal-2023**

Sy-Miin Chow et al. "Continuous-time dynamic models: Connections to structural equation models and other discrete-time models". In: *Handbook of structural equation modeling*. Ed. by Rick H. Hoyle. 2nd ed. New York: The Guilford Press, 2023. ISBN: 9781462550722.

Gates et al.: Intensive longitudinal analysis of human processes

Gates-Chow-Molenaar-2023

Kathleen M. Gates, Sy-Miin Chow, and Peter C. M. Molenaar. *Intensive longitudinal analysis of human processes*. Chapman & Hall/CRC statistics in the social and behavioral sciences. Boca Raton: Chapman & Hall/CRC Press, 2023. ISBN: 9780429172649. DOI: 10.1201/9780429172649.

Abstract: This book focuses on a span of statistical topics relevant to researchers who seek to conduct person-specific analysis of human data. Our purpose is to provide one consolidated resource that includes techniques from disciplines such as engineering, physics, statistics, and quantitative psychology and outlines their application to data often seen in human research. The book balances mathematical concepts with information needed for using these statistical approaches in applied settings, such as interpretative caveats and issues to consider when selecting an approach. The statistical topics covered here include foundational material as well as state-of-the-art methods. These analytic approaches can be applied to a range of data types such as psychophysiological, self-report, and passively collected measures such as those obtained from smartphones. We provide examples using varied data sources including functional MRI (fMRI), daily diary, and ecological momentary assessment data. Features: Description of time series, measurement, model building, and network methods for person-specific analysis Discussion of the statistical methods in the context of human research Empirical and simulated data examples used throughout the book R code for analyses and recorded lectures for each chapter available at the book website: https://www.personspecific.com/ Across various disciplines of human study, researchers are increasingly seeking to conduct person-

specific analysis. This book provides comprehensive information, so no prior knowledge of these methods is required. We aim to reach active researchers who already have some understanding of basic statistical testing. Our book provides a comprehensive resource for those who are just beginning to learn about person-specific analysis as well as those who already conduct such analysis but seek to further deepen their knowledge and learn new tools.

Geffner et al.: Probabilistic and causal inference: The works of Judea Pearl **Geffner-Dechter-Halpern-2022**

Hector Geffner, Rina Dechter, and Joseph Y. Halpern, eds. *Probabilistic and causal inference: The works of Judea Pearl*. 1st ed. Vol. 36. New York, NY, USA: Association for Computing Machinery, 2022. ISBN: 9781450395861. DOI: 10.1145/3501714.

Abstract: Professor Judea Pearl won the 2011 Turing Award "for fundamental contributions to artificial intelligence through the development of a calculus for probabilistic and causal reasoning." This book contains the original articles that led to the award, as well as other seminal works, divided into four parts: heuristic search, probabilistic reasoning, causality, first period (1988-2001), and causality, recent period (2002-2020). Each of these parts starts with an introduction written by Judea Pearl. The volume also contains original, contributed articles by leading researchers that analyze, extend, or assess the influence of Pearl's work in different fields: from AI, Machine Learning, and Statistics to Cognitive Science, Philosophy, and the Social Sciences. The first part of the volume includes a biography, a transcript of his Turing Award Lecture, two interviews, and a selected bibliography annotated by him.

Hayes: Introduction to mediation, moderation, and conditional process analysis: A regression-based approach **Hayes-2022**

Andrew F. Hayes. *Introduction to mediation, moderation, and conditional process analysis: A*

regression-based approach. 3rd ed. Methodology in the social sciences. Guilford Publications, 2022. 732 pp. ISBN: 9781462549030.

Abstract: Lauded for its easy-to-understand, conversational discussion of the fundamentals of mediation, moderation, and conditional process analysis, this book has been fully revised with 50% new content, including sections on working with multicategorical antecedent variables, the use of PROCESS version 3 for SPSS and SAS for model estimation, and annotated PROCESS v3 outputs. Using the principles of ordinary least squares regression, Andrew F. Hayes carefully explains procedures for testing hypotheses about the conditions under and the mechanisms by which causal effects operate, as well as the moderation of such mechanisms. Hayes shows how to estimate and interpret direct, indirect, and conditional effects; probe and visualize interactions; test questions about moderated mediation; and report different types of analyses. Data for all the examples are available on the companion website (www.afhayes.com) along with links to download PROCESS.

Myin-Germeys et al.: The open handbook of experience sampling methodology **MyinGermeys-Kuppens-2026**

Inez Myin-Germeys and Peter Kuppens, eds. *The open handbook of experience sampling methodology*. 3rd ed. Leuven, Belgium: Leuven University Press, Jan. 2026. ISBN: 9789461666925. DOI: 10.11116/9789461666925.

Abstract: As obvious as it may sound, the essence of human experience—our thoughts, emotions, behaviours and social interactions—plays out in the course of everyday life. Experience Sampling Methodology (ESM) is the gold standard for studying people's experiences in their everyday environments. In this third edition of The Open Handbook, experts from the Center for Research on Experience Sampling and Ambulatory Methods Leuven (REAL) provide up-to-date, empirically based advice for designing, conducting and analysing ESM studies. This comprehensive guide walks readers through every step of ESM research: from formulating research questions and optimally designing ESM studies and questionnaires, to addressing ethical considerations and practical issues such as power calculations, software choices and briefing/debriefing procedures. It also covers preprocessing and analysing intensive longitudinal data and explores future applications of ESM. Each chapter of this third edition has been updated with the latest methodological developments and insights, and a new chapter on dyadic ESM research has been added. Ideal for both novice and expert researchers, this handbook is an invaluable resource for anyone embarking on ESM research.

Pearl: Direct and Indirect Effects **Pearl-2022**

Judea Pearl. "Direct and Indirect Effects". In: *Probabilistic and causal inference: The works of Judea Pearl*. Ed. by Rina Dechter Hector Geffner and Joseph Y. Halpern. Association for Computing Machinery, Feb. 2022, pp. 373–392. ISBN: 9781450395861. DOI: 10.1145/3501714.3501736.

Vanhasbroeck et al.: Computational models for affect dynamics

Vanhasbroeck-Ariens-Tuerlinckx-etal-2021

Niels Vanhasbroeck et al. "Computational models for affect dynamics". In: *Affect dynamics*. Ed. by Christian E. Waugh and Peter Kuppens. Springer International Publishing, 2021, pp. 213–260. ISBN: 9783030829650. DOI: 10.1007/978-3-030-82965-0_10.

Abstract: Computational models of affect dynamics are ubiquitous. These models are appropriate for either exploring intensive longitudinal data or testing theories about affect dynamics. In this

chapter, we give a brief overview of some of the computational models that have been applied in the field of affect dynamics, focusing on both discrete-time and continuous-time models. The emphasis of this chapter lies on describing the core ideas of the models and how they can be interpreted. At the end, we provide references to other important topics for the interested reader.
